DETAILED ACTION

Allowable Subject Matter

Claims 1-15, 17, 19-31, 33-40, 42-55, 57, 59-60 are allowed.

Claims 16, 18, 32, 41, 56, 58 are canceled.

The following is an examiner's statement of reasons for allowance:

The claims in this applicant have been allowed because the prior art of record fails to disclose either singly or in combination the claimed electric breast pump device comprising: a hood member; a chamber in air communication with hood member and a first valve; a motor; a pumping member movable by the first motor to draw air from the hood member into the chamber via said first valve; a milk receiving bottle; a second valve in air communication with the bottle; wherein the chamber has a first opening and a closure member which is movable by the first motor between the first position (in ON state) to close the first opening; and a second position (OFF state) in which the first opening is opened.

The closest prior art of record is Morifuji (US 4,886,494); Schelnsog et al. (US 4,673,388).

Morifuji discloses a breast pump device but fails to teach among all the limitations or render obvious the chamber has a first opening and a closure member which is movable by the first motor between the first position (in ON state) to close the first opening; and a second position (OFF state) in which the first opening is opened. In Morifuji, at the operation ON states, the diaphragm 43/closure member is movable by the motor 8. However, the diaphragm/closure member 43 is moved back or forth to continuously expands and contracts the suction chamber, see Figs. 10-11. In other words, the diaphragm 43/closure member is closed at OFF states (Fig. 1); a second valve 33 in air communication with the bottle, col. 9, line 52-col. 10, line 8.

Schelnsog discloses a breast pump device comprising: a chamber 255 in air communication with hood member 101 via a first valve 254; a first opening 253; a closure member 251 which is movable by the first motor 21 between a first position (ON state) to close the first opening and a second position (OFF state) in which the first opening is opened (Fig. 2). Scheinsof fails to teach among all the limitations or render obvious the second valve in air communication with the bottle.
